Secure Your Network.
Safeguard Your Devices.
Protect Your Patients.

IoT and Medical Device Security

Agiliti has partnered with Asimily to offer a comprehensive cybersecurity service solution to secure the devices you need to support patient care. The partnership combines Asimily's vulnerability management, risk monitoring and security operations expertise with onsite Clinical Engineering services and device expertise from Agiliti.

1

Inventory

The Asimily platform conducts continuous, passive network scanning to discover all connected devices in the environment (medical and non-medical) using a combination of AI and deep parsing of protocols.

2

Risk Prioritization and Management

Asimily's scalable managed security services can stand up a fully outsourced security operations center at your facility. Asimily risk remediation experts monitor data, identify and prioritize vulnerabilities and develop proactive, targeted risk management plans. The service also monitors for anomalies and threats and sets any additional policies as needed.

3

Risk Remediation

The Agiliti team rapidly implements device-level remediation plans to address identified risks as based on risk prioritization and management plans provided by Asimily or in-house IT teams. Where appropriate, the Asimily Security team and Agiliti will provide the in-house security teams with suggestions to implement network-level adjustments.

agiliti

Our integrated cybsercurity services combine the expertise and capabilities of Agiliti and Asimily to effectively safeguard your equipment and mitigate cybersecurity threats. Our teams can design and implement a program tailored to the needs, preferences and resources of your facility.

Asimily

- Automated discovery of inventory and its parameters on the network
- Identify vulnerabilities, determine which are exploitable, prioritize them based on impact, MDS2, and other factors, and provide mitigations where possible
- Discover security threats and anomalies, provide policy management capabilities, share mitigation recommendations and packet capture capabilities to enable forensic analysis and ACLs/Firewall rules
- Provide utilization data for connected medical devices
- Enable governance by providing comprehensive data and visibility

Asimily Managed Services*

- Program management for implementation, integration and validation of the Asimily tool
- Prioritize risk by working with Agiliti and the HDO Security Team to confirm risks, assess exploitation probability and determine the impact
- Work with Agiliti and the HDO Security Team to develop risk mitigation plans
- Create policies using the Asimily policy management module

* A Healthcare Delivery Organization (HDO) may opt to handle these managed services with their internal resources.

Agiliti

- Close information gaps with physical inventory investigations
- Provide contextual guidance on the organizational impact of vulnerabilities
- Implement and enforce Asimily's recommendations when device-level remediation is required
- Validate remediation effectiveness and check for unintended consequences
- Manage onboarding, lifecycle cyber-maintenance and disposition of medical devices
