Speed is not adjustable in Vibration mode.

Zone

Press **ZONE 1**, **ZONE 2** and/or **ZONE 3** to set therapy zone. *Up to three zones may be selected (see illustration on reverse).*

CHEST PHYSIOTHERAPY EXPLAINED

The purpose of chest physiotherapy (CPT) is to help patients breathe more freely and to facilitate oxygen and carbon dioxide exchange in the lungs. Percussion/Vibration therapy is used to help break up thick secretions in the lungs by repeatedly stimulating the chest wall.

Percussion/Vibration therapy can be programmed to focus on one, two or all three zones of the back, targeting the movement of fluid in the patient's lungs.

All therapy should be aligned with patient's lungs
